Table of Contents

1 - Discovery Tasks

This table contains a listing of all tasks which were performed as part of this assessment. Items which do not contain a check were not performed.

	Task	Description
✓	Detect Domain Controllers	Identifies Domain Controllers and Online status
✓	FSMO Role Analysis	Enumerates FSMO roles at the site
✓	Enumerate Organization Units and Security Groups	Lists the Organizational units and Security Groups with members
✓	User Analysis	List of users in AD, status, and last login/use, which helps identify potential security risks
✓	Detect Local Mail Servers	Mail server(s) found on the network
✓	Detect Time Servers	Time server(s) found on the network
✓	Discover Network Shares	Comprehensive list of Network Shares by Server
✓	Detect Major Applications	Major apps / versions and count of installations
✓	Detailed Domain Controller Event Log Analysis	List of event log entries from the past 24 hours for the Directory Service, DNS Server and File Replication Service event logs
✓	Web Server Discovery and Identification	List of web servers and type
✓	Network Discovery for Non-A/D Devices	List of Non-Active Directory devices responding to network requests
✓	Internet Access and Speed Test	Test of internet access and performance
✓	SQL Server Analysis	List of SQL Servers and associated database(s)
✓	Internet Domain Analysis	“WHOIS” check for company domain(s)
✓	Password Strength Analysis	Uses MBSA to identify computers with weak passwords that may pose a security risk
✓	Missing Security Updates	Uses MBSA to identify computers missing security updates
✓	System by System Event Log Analysis	Last 5 System and App Event Log errors for servers
	External Security Vulnerabilities	List of Security Holes and Warnings from External Vulnerability Scan

3 - Domain: CONTOSO.LOCAL

This section and corresponding sub-sections contain a comprehensive view of the domain.

3.1 - Domain Controllers

This section contains a listing of all Domain Controllers and their corresponding status.

Domain Controller	Status
AD1	online
AD3	online
AD4	offline
AD5	online
VDC973-1	offline

3.2 - FSMO Roles

This section contains a listing of all FSMO (Flexible Single Master Operation) roles, which are needed to operate a Windows domain.

Role	Domain Controller	Best Practice
Infrastructure Master	AD5.CONTOSO.LOCAL	Domain Specific
Domain Naming Master	AD1.CONTOSO.LOCAL	Forest Wide
PDC Emulator	AD5.CONTOSO.LOCAL	Domain Specific
Relative ID (RID) Master	AD5.CONTOSO.LOCAL	Domain Specific
Schema Master	AD1.CONTOSO.LOCAL	Forest Wide

3.3 - Organizational Units

This section contains a hierarchical view of all organizational units from within Active Directory.

- **CONTOSO.local**
  - **Computers Disabled (2 Computers)**
  - **Domain Controllers (5 Computers)**
  - **CONTOSO users (5 Contacts, 98 Security Groups, 147 Users)**

11 - Endpoint Security and Backup

This section contains a listing of detected Antivirus, Antispyware, Firewall, and Backup information as detected through *Security Center* and/or *Installed Services* for major vendors, which is then categorized by domain or workgroup membership.

Values in the \"Name\" column contain either the name of the product, None indicating the machine returned information but no product was found, or <empty> indicating information was not obtainable. Further, a status of ✓ indicates \"yes\", ✘ indicates \"no\", and <empty> indicates that a status was not available.

				target service account. Please ensure that the service on the server and the KDC are both updated to use the current password. If the server name is not fully qualified, and the target domain (CONTOSO.LOCAL) is different from the client domain (CONTOSO.LOCAL), check if there are identically named server accounts in these two domains, or use the fully-qualified name to identify the server. 11-26-2014 11:20:18 AM 1073741828 The Kerberos client received a KRB_AP_ERR_MODIFIED error from the server ws787$. The target name used was HOST/WS145_160FOL. This indicates that the target server failed to decrypt the ticket provided by the client. This can occur when the target server principal name (SPN) is registered on an account other than the account the target service is using. Please ensure that the target SPN is registered on, and only registered on, the account used by the server. This error can also happen when the target service is using a different password for the target service account than what the Kerberos Key Distribution Center (KDC) has for the target service account. Please ensure that the service on the server and the KDC are both updated to use the current password.
